SPECIAL ISSUE: Progress in Psychopharmacology

GUEST-EDITORS  
**Giulia Treccani** & **Todd Gould**  
University of Marburg GERMANY  
University of Maryland School of Medicine USA

## CALL FOR PAPERS

In recent years, the field of psychopharmacology has witnessed rapid developments, with the potential to fundamentally transform the landscape of treatment options for neuropsychiatric disorders. Among the most notable advancements are for example the emergence of a rapid-acting antidepressant, ketamine, offering new hope that this finding will lead to further discovery and development of new possibilities for patients with depression.

*Acta Neuropsychiatrica* announces a call for submissions to a special issue titled "**Progress in Psychopharmacology**," dedicated to showcasing the latest advancements in the field. This issue aims to cover a wide range of topics, from preclinical science to cutting-edge overviews of new drugs in clinical trials to comprehensive pharmacoepidemiological studies, underscoring their significance in the treatment of neuropsychiatric disorders.

We invite researchers to contribute original articles and review papers that provide fundamental insights into both clinical and preclinical studies, with a particular emphasis on novel findings in drug mechanisms of action, development, and treatment outcomes.

Final submissions are due **December 1<sup>st</sup> 2024** on the Journal submission site: <https://mc.manuscriptcentral.com/acn>

Express interest in the issue here: <https://forms.office.com/e/mK8Jppbbu7>

All submissions will be peer-reviewed.

University, Denmark

**2022 IMPACT FACTOR: 3.8**

## SCOPE

*Acta Neuropsychiatrica* is an international journal focussing on translational neuropsychiatry. It publishes high-quality original research papers and reviews. The journal's scope specifically highlights the pathway from discovery to clinical applications, healthcare and global health that can be viewed broadly as the spectrum of work that marks the pathway from discovery to global health. The steps of translation that are within the scope include:

- 1) fundamental discovery,
- 2) bench to bedside,
- 3) clinical trials
- 4) translation to clinical guidelines,
- 5) health policy and usage, and
- 6) global health.

Research covering molecular biology, genetics, pharmacology, imaging and epidemiology is welcome.
