Acta Neuropsychiatrica

SPECIAL ISSUE: DIGITAL MENTAL HEALTH

GUEST-EDITORS: Søren Dinesen Østergaard & Lasse Hansen

CALL FOR PAPERS

In recent years, there has been a huge expansion of new digital tools and systems for mental health assessment, intervention, support, prevention, and treatment. Many studies highlight the potential positive uses of digital tools and innovative technologies in this field; however, there are also numerous studies that underline the indiscriminate use of such tools and the need to create effective technological services that are truly mental health oriented.

We are excited to invite you to contribute to this special issue of Acta Neuropsychiatrica. We welcome both review articles and empirical papers, including submissions from all types of research including epidemiology, mechanisms, brain imaging, immune function, predictive modeling, therapeutic potential, cognition, and regulatory issues. The special Issue is open to any subject area related to understanding the complexity of digital mental health.

Sign up for the issue here: <https://forms.office.com/r/DJGBUpyHca>

Final Final submissions will be due *June 1st 2023*.

All submissions will be peer-reviewed.

2021 IMPACT FACTOR: 4.513

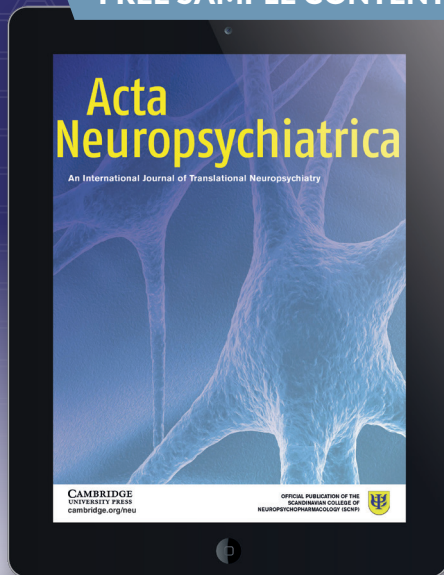

SCOPE

Acta Neuropsychiatrica is an international journal focussing on translational neuropsychiatry. It publishes high-quality original research papers and reviews. The journal's scope specifically highlights the pathway from discovery to clinical applications, healthcare and global health that can be viewed broadly as the spectrum of work that marks the pathway from discovery to global health. The steps of translation that are within the scope include:

- 1) fundamental discovery,
- 2) bench to bedside,
- 3) clinical trials
- 4) translation to clinical guidelines,
- 5) health policy and usage, and
- 6) global health.

Research covering molecular biology, genetics, pharmacology, imaging and epidemiology is welcome.
